GROWTH AND PROGRESS

of the city of Mercur, which, from a strangling camp of four or five tumble (wn houses, four or five years ago, can now boast of several thousand popular can now boast of several thousand population, a city government, churches, first-class hotels, theatres, large business houses, telephone and telegraphic service, fine water system, and many advantages which are included in the make-up of a metropolitan and busi-

ness center.

As a matter of fact, Mercur has made wonderful strides to the front since the Mercur mine came to the front as a success, and since Captain J. R. De Lamar recognized the importance and

WILL BEGIN OPERATIONS

within a short time, while the Duisy and Edna May will justify the erection of reduction works at no distant day, and other finds in that section are of a most encouraging nature.

Three miles north of Mercur, on Lion Hill, the Northern Light has a new mill in operation, while the Chloride

Mercur has now attained such proportions that a brief review of its career
would not be out of place, but, on the
contrary, entirely proper.

As is well known, the heart of the
great canno of Mercur was an abandoned silver region long before the existence of gold was discovered there.

In fact, the silver mines of Mercur were

GOLD IN GALENA ORE.

Examination Made of the Old Spake Crock Relief Mine. The Park Record, in its weekly min-

The Park Record, in its weekly mining review, says:

An old Snake creek property that has been little heard of for many, many years, is likely to again create a stir in mining circles. Vesterday forenoon Mr. N. Treweek, who owns the property, came out with a party of eastern and French capitalists to examine the ground with a view, it is understood, of cither leasing and bonding or buying the ground. The name of the property is the Relief and it is located on top of the ridge on the north side of Snake creek, near the head of the canyon. It is a copper proposition, pure and simple, but no work has been done on the ground, which is patented, for 15 or 18 years. There is a shaft 50 feet deep, four feet in the clear, sunk in ore all the way, and a drift from the bottom—40 feet in length, which was run to cross-cut the ledge, but no wall has been encountered. This drift is also in ore, average samples of which, the Record is informed run from 16 to 14 been encountered. This drift is also in ore, average samples of which, the Record is Informed, run from 19 to 14 per cent copper, with a small amount of gold. It is thought by old timers who are familiar with the ground, that it will make a mine. W. L. Treweek, accompanied by C. A. Springer, went over to the property Wednesday to put up a windiess with which to lower the visitors on their arrival. Though the ground has laid idie for so many years the shaft is said to be in good condition. More will be heard of this property in the near future.

erty in the near future

WIRE GOLD IN GALENA. Captain Springer was up to the new gold strike in Snake creek Monday and good strike in Shake creek alonday and reports it to be all right. He says he saw something while there that he never saw or heard of before in his life. In the face of the tunnel that is being started on the ledge he picked out a small piece of galena which had with sold remains through it. wire gold running through it. He ad-mils the story sounds incredible, but says it is a fact, just the same. He be-lieves that Messrs. Davis and Goist,

mo more get gold out of the ore than they could get blood out of a turnip, and the stock of the company went begging at less than 50 cents a share.

With the pertinacity of buildors, however, Peyton and Brown heid on alliangh hope was locking through the big end of the telescope.

Blood tells, however, and so does early training and education, and Mr. Peyton's experience in chemistry led to an investigation of the cyanide process of reduction, which was just being introduced into this country and which was meeting with the condemnation and opposition which generally is the attendant of the bringing to public no-

Sweeney have taken a lease on a property at Bingham and expect to make a good thing of it this winter. Messrs. Grose and Sweeney left Thursday afternoon for Salt Lake and today will go out to the property with tools, powder and provisions to see them through which could not be recovered by the the winter. It is a lead silver and rold

proposition.

For several months past T. H. Pauli and aspeciates, who have a lease on the Autumnal claim, located on the Bon-anza side of Pionser ridge and owned

goodly cash surplus, it has on hand the \$237,500 recently received from Captain J. R. De Lamar as purchase price for less than seven acres of ground embraced in the Mercur group, and which will doubtless be used in the way of increased dividends from now on.

At the same time the company has increased the capacity of its plant from a few tone daily to 300 tons every 24 hours, besides which it stood to a large extent, sponsor for J. G. Jacobs Sait Lake & Mercur rallway, the connecting link between Fairfield, on the O. S. J., and Mercur, and it may truly be said that this little road has since done much towards paymoting the In speaking of J. H. Conrad, who is heavily interested in Mercur properties, the Butte Mining World says:

J. H. Conrad, of the Montann Coal & Coke company, gave a Livingston exchange recently, a statement relative to the plans for future operations at Horr which, if curried to a successful termination, says the Enterprise, will revolutionize the coke industry and make Park county the logical point for smelter operations. The position is to not only convert the output of the mines of his company at Addiridge into coke, but to save and utilize the by-products of gas, coal tar and dyes, and with the gas and water power, which now goes to waste, operate smelters for the treatment of ores at a minimum cost never yet approached in smelter operations in Montana. When it is recalled that through the efforts and by the inventive genius of Mr. Conrad in introducing the water gravity system for conveying coal from the mines to the oven the water gravity system for conveying coal from the mines to the oven the salready been greatly reduced, his proposed future operations as in the interested on the mine and to getting a big supply of rock ready for the mill next year, will be carried on throughout the winter. That veteran mine operator, Colonel Trarise, who has brought the winter. That veteran mine operator, Colonel Trarise, who has brought the winter. That veteran mine operator, Colonel Trarise, who has brought the winter. That veteran mine operator, Colonel Trarise, who has brought the winter. That veteran mine operator, Colonel Trarise, who has brought the winter. That veteran mine operator, Colonel Trarise, who has brought the winter. That veteran mine operator, Colonel Trarise, who has brought the winter. The time between of collapse to product on the mill next year, will be carried on throughout the winter. That veteran mine operator, Colonel Trarise, who has brought the winter. The time has all in readiness to conduct on the winter. The popear of the mile next year, will be carried on throughout the winter. The tim

in the furnaces and for all heating purposes, besides, as Mr. Courad believes, it can be employed as an agency in saving labor of skimmers and possibly other employees whose services cannot be dispensed with in the ordinary methods of treating ores. Besides the gas, water power and natural site for smelting operations, Horr possesses ilme, silica, fire clay and other essentials for ore treatment that makes it the ideal locality for minimizing the expense of smelting, and with all those advantages Mr. Conrad is certain that he can operate a smelter at the point at an expense that will make competition from other points impracticable, and at the same time permit the remunerative reduction of much of the state's low grade ore that will not pay the present smelter charges. At any rate he has the necessary financial encouragement and promises of ore from mine owners at Butte, and he will expend at least \$150,000 during the next year in the effort to demonstrate the feasibility as well as the practicability of the contemplated enterprise.

BOCKEFELLER IS AFTER GOLD.

Oil Trust Magnate to Build a Rail-

road Into Rainy Lake. John D. Rockefeller has the gold fever, it is believed, and seriously con-Ecrease the stock from \$3,000,000 to

\$10,000,000 at a meeting held in this city yesterday. This followed as the result of the action of the stockholders at a meeting held in Duluth the day before. meeting held in Duluth the day before. The connection between this action and operations in the gold fields is found in the well-grounded suspicion that a large amount of this unusually large increase of stock is to be devoted to the construction of a branch line of the road extending up into the Rainy Lake gold regions lying on the American and Canadian border, which are likely to become very rich producers.

ducers.

There was a disposition on the part of the directors to deny that any such movement was contemplated, although admitted that the officers of the road had been approached in regard to the matter of building a road into that region and that it might be done if it could be done to advantage.

region and that it might be done if it could be done to advantage.

Those present at the meeting were H. H. Porter of the Chicago & Eastern Illinois road; Marshall Fleid, J. L. Greatsinger. Duluth, president of the Duluth & Iron Range road; D. E. Bacon, of Tower, Minn., president of the Minnesota Iron company, which is the heaviest stockholder of the road; C. W. Holland, of Duluth, secretary and treasurer of the road; M. J. Carpenter, Chicago, chairman of the board of directors; C. P. Coffin and James Belden of Chicago; and J. H. Chandler, Chicago, general solicitor of the road. Other directors not present were D. O. Mills and George S. Brewster of New York.

The present mileage of the road is 154, extending from Two Harbors, on the northern shore of Lake Superior, 27 of rolling stock, is to put the corpora-tion in a position to take advantage of any contingency which may arise, which, under the circumstances, it is which, under the circumstances, it is

which, under the circumstances, it is not unreasonable to assume, lies in the direction of a Rainy Lake branch.

J. H. Chandler, general solicitor of the road, speaking of the action of the directors said that under the laws of Minnesota, no stock can be issued except it be fully paid up either in money property is bor or material and their property, labor or material, and that the new stock will only be issued and used from time to time as required in making necessary extensions of the road and improvements. A large sum would be spent he said in the construcwould be spent he said, in the construc-tion of additional docks at Two Har-bors, while \$1,000,000 will be spent in the new equipment during 1828. The road has a charter, he said, to build to the Gun Flint lake country, about 63 miles distant in a northeasterly di-rection on the border, but nothing would be done until it became apparent that if yound that it would prove a paying invest-ment. He said the road had been so-licited to build into the Rainy Lake region, and might do so.

The mill at the Leiter mine at Leiterville, in Madison county, says the Butte Miner, has been shut down on account of freezing water after one of the most profitable season's run in its history. Operations leoking to the further blocking out of the big ore ody recently struck in the mine and to

Mercur mine came to the front as a success, and since Castain J. R. De Lamar recognized the importance and future of the camp.

Next to the Mercur mine, the Golden Recking in the district. Backing his pianting in the district. Backing his pianting will not be accepted as in the least chimerical, although they are a revealation to the novice in coke and buildon the carry depth. This theory are depth of 500 feet the lead on which is low the captain. An Cornad proposes to put in a best plant to the novice in coke and buildon the novice in coke and buildon

distance of \$2 feet. At 150 feet another drift has been run 125 feet and the men are now running an upraise to connect with the upper drift. Mr. Dolan brought in some samples of ore taken from the breast of this drift which carry heavily in free gold. On the dump are almost 600 tons of good grade ore and in the spring Mr. Dolan proposes butting up a ten-stamp mill on his property. He will continue development operations through the winter. Nolan, Boney and Holman, of this city, announce that the development of their properties in Norwerian district. Madison county, will continue all winter. A substantial double walled bunk house and office and eating house and kitchen have just been erected on the ground conveniently near to the three claims, the Crack-a-jack, Spokane and Bimetaillic, on which work will be pushed till spring. The shaft on the Spokane has attained a depth of 50 feet, and the ledge is four feet thick. Work on the Bimetaillie is progressing nicely and the preschoules. Work on the Binectalite is progressing and nicely and the ore showing is encouraging. The remaining seven claims of the outfit have all been accorded the necessary representation work. N. A. Doney, a veteran prospector and miner, has charge of the work and will spend the winter on the property.

PLUCK OR LUCK. The Former is Good But the Latter

Averages Up the Best. In an article in Cassier's Magazine

templates extending his operations beyond the plebeian fields of oil and from into the aliuring realm of the yellow metal. The reason for this belief says the Chicago Tribune, is found in the action of the board of directors of the Duluth & Iron Range railroad, which is generally considered to be controlled by the Rockefeller interest, in voting to increase the stock from \$2,000,000 to pluck, energy, determination, etc., as if such qualities were alone responsi-ble for the success or non-success of the prospector. The fact is, says the Western Mining World, thousands of prospectors have been exercising all these commendable virtues with great vigor for the past 25 or 30 years, within out encountering a bonanza, while men of less heroic mould—tenderfeet, per-

covenant to lave in the sweet incense of unalloyed success.

Prospectors who attain wealth through a fortunate discovery often lay the flattering unction to their souls that success came alone through their own transcendent abilities. Perhaps Mr. Rickard secured his data as to luck from some of these fellows. It is a known fact that many of the best mines in the world were discovered through lucky accidents. Montana is ripe in experiences of this kind, and expects to harvest a few more before mining becomes such an exact science at Manning, several miles from the miles from the miles analgamation being the process graphyoed. It was soon found, however, that the process was a failure, owing to the fact that there was but little free or indive gold in the ore, the bulk of the miles and more; being in what is termed a "rebellous" state.

It was then, when failure was staring the company in the face, and when much then and money had been lost, and the entrypise had "lest standing" with miling mem, fai, indeed, it had ever had any, that Gil S. Peyton and Hall W. Brown, two of the Nebrasia, "tender the face with the process out of failure, but they could no more get gold out of the ore than they could no more get gold out of the ore than they could no more get gold out of the ore than they could get blood out of a turnin, and they could get blood out of a turnin, and they could get blood out of a turnin, and they could get blood out of a turnin, and they could get blood out of a turnin, and they could get blood out of a turnin, and they could get blood out of a turnin, and they could get blood out of a turnin, and they could get blood out of a turnin, and they could get blood out of a turnin, and they could get blood out of a turnin, and the ground and they could get blood out of a turnin, and the ground and they could get blood out of a turnin, and the ground get from Two Harbors, on the miles and continued the same, the same, He same the same the same the same the process with of a turning through lacky actions. Perhaps the fast sciences came alone through their success came alone throu cess rests in pluck, energy and determination. A man may be gifted with the wisdom of a Solomon and the energy of a steam engine, with the pluck of a buildog on a cow's ear, yet never "strike it rich," however promising the surface indications. Bonanzas that are close enough to the surface to be within the reach of poor men are few and far between. When found by the wayfaring prospector it is apt to be the result of providence, luck, fate, destiny or something else that has a very remote connection with pluck, energy and determination, as usually applied and un-

The Black Dragon. Silver City Star: Superintendent Marx now has 15 men at work on the ing sunk on the ground. ing sunk on the ground. The winze at the old workings is down 270 feet, and the old workings is down 370 feet, and several small bodies of good looking copper have been cut through. The Biack Dragon is one of the early locations of the district. It was located Jan. 3, 1870, by the same parties who made the first location in Tintic, the Sunbeam. It lies between the famous Dragon iron mine and the North Star, and in old days produced much good are near the surface. Superintendent ore near the surface. Superintenden Marx believes he is not for from a body Marx believes he is not for from a body of good ore, and unless all signs fall the stockholders will soon be rewarded for their faith in the property. The North Star on the other side of the hill has long been a steady producer.

Mining Notes.

AFRICAN GOLD FIELDS.

Hopes Shattered by the Reckless Methods of Promoters.

Johannesburg Letter in London Tele-graph: "Under existing conditions, 100 mines will have to close down." This sentence from the report of the industrial commission I quote as a clew to the mystery which hangs over the bewitch-ing gold field of the Rand. Qur circum-

these commengance virtues with great vigor for the past 25 or 3 years, without encountering a bonanza, while men of less herolc mould—tenderfeet, perhaps—have actually stumbled into possession of large wealth without knowing the first principles of the mining business. If pluck, energy, determination, observation, and all the other splendid attributes to which Mr. Rickard alludes, were guarantees of success a man couldn't shoot at a prairie chicken in Montana without hitting a millionaire.

The man who, early in his career as a prospector, finds a promising lode and stays with it until he realizes a fortune is not entitled to half the credit due the man who, after repeated disappointments, still searches for the elusive bonanza until from grizzly old age he slides into "the lean and slippered pantaloon." In the nature of things the element we call luck for want of a botter designation, enters into the mining business insofar as the discovery of bonanza lodes is concerned. Every year the "conclusions" of experts are upset by the discovery of ore under "impossible conditions," and many of the beautiful and wonderfully symmetrical facts in geology are ripped up the back like an old cost on a cadaver. In the absence of positive knowledge as to external evidences the experienced prospector may waste his energies hunting for a pigmy in a land of giants, while the tenderfoet follows his uneducated nose into the very ark of the covenant to lave in the sweet incense of unalloyed success.

The f

demis, and will continue to politious rich stream from a lifern of plenty, untillone by one, they are exhausted. They may dwindle to one-fourth its present size; the languishing trade of South Africa may fall off one-half; the government of Pretoria may see its revenue shrinking year by year, like the shanks of old age; yet these returns will be as sure as any human thing can be. So one would have said, at any rate, until this morning; but President Kruger's speech at Krugersdrop shattered even that last remnining sired of confidence. He told the people there that "the rich mines must be made to assist the government in supporting the poor ones," which obviously means that tax on dividends which I foreshadowed four months ago.

The Surprise of All. Mr. James Jones, of the drug firm of Jones & Son, Cowden, Ill., in speaking of Dr. King's New Discovery, says that last winter his wife was attacked with La Grippe, and her case grew so serious that physicians at Cowden and Pana could do nothing for her. It seemed to develop into Hasty Consumption. Having Dr. King's New Discovery in store, and selling lots of it, he took a bottle home, and to the surprise of all she began to get better from the first dose, and half a dozen dollar bottles cured her sound and well. Dr. King's New Discovery for Consumption, New Discovery for Consumption, Coughs and Colds is guaranteed to do this good work. Try it. Free trial bot-tles at Z. C. M. I. drug store.

Have we sought to know how it is with our prophers of the comforts of life? Have we sought to know how it is with our prophers. Son the frosts and chills of approaching winter will sweep across the balans and Adolph Richter (Hoffman & Richter) the sole signey and exclusive sale of all unsold lots in "North Waterleav" and profession to the contents of the propher in the contents of life? Have we sought to know how it is with our prophers. Sir Knight Beeman, this clearly support the sole support to the work sources as a special deputy for Wyoning, will organize this appear of whether the propher in the state was conscience an appear to the same and the order if all the leader of the water of every memb

In Montana the work is progressing in fine shape under the state management of State Deputy Newell. A great meeting was held at Butte in honor of Sir Knight Markey, and the papers of that city and of Ansconda gave it an extended write-up. The reception at Bozeman was the most enthusiastic of any of the receptions given him in Montana, but of course they could not raily as large an attendance at the meeting there as at a larger place. This visit to the inter-mountain country of the supreme commander of this order visit to the inter-mountain country of the supreme commander of this order will greatly advance the work in the section effected. The order is better known as a result of his visit than it has ever been heretofore, and this knowledge will bring many deserving people so its ranks. At the review of the tent in this city on Friday night last, 16 new applications for membership were received and as many more are assured for the next review. The tents in the surrounding towns are also favorably effected so that it is expected that many good people will become members of the order during the win-

Court Salt Lake No. 1355, Indepencourt sail Lake No. 130a, indepen-dent Order of Foresters, on last Friday evening had a well attended and quite an interesting session, routine business and the infitation of one candidate oc-cupied the time until a late hour. Next Friday evening will be initiation, also election of officers,

The court has recently purchased new badges for officers and members, which will greatly add to the appear-ance of the court.

ance of the court.

Evergreen lodge No. 151, Fraternal Union of America, held forth last Monday in their hall on Main street. There such a large attendance of mean was such a large attendance of members that the room, though of good size, was uncomfortably crowded. Firteen more applicants were initiated and became full fledged fraters. T. J. Shandal, D. S. P., is greatly assisted by the old members, in securing new candidates, and all these working harmonically together being great results.

dates, and all these working harmoni-ously together bring good results. This order is a member of the fraternal con-gress and is rapidly growing in all sec-tions of the country. . Tonight a social will be given, which, under the able guidance of the ladies of the committee, promises to be an "event" in the life of No. 151. Dainty refreshments will be served during the evening to all mests of the lodge, and members, and a regular good time is anticipated.

One of the most enjobable meetings of James B McKean pest G. A. R., was held on last Monday evening, at which time the annual inspection of the post was conducted by Comrade Cor-ser, assistant inspector. After the reg-ular order of business was concluded a letter from Comrade J. C. Morrill, a former resident of Salt Lake, but now living at Laconia, New Hampshire, was read. His reference to his now living in "the hide bound state of New Hampshire" created some feeling in the breasts of the comrades who claimed that state as their mother, and who defended its reputation in entertaining and witty remarks. This caused

Too Plain. Roston Transcript: Uncle George-Why do you use the word "auxiliary" when "helper" would do as well?
The Literary Nephew.—Good Gracious; and let everybody know what I mean? I'm afraid, Uncle George, you are not quite up to the true literary standard.

A knock down argument is the final piece of logic used by Nature. Many people lean on the "dont-hurt-me" theory about coffee and tobacco until the beautiful machinery of the body collapses. Postum Food
